Key module narrow switches graphite Simon 82 with centralizations SIMON 82010-68

Brand: SIMON

Reference: SIMON 82010-68

Half element key for graphite control mechanisms Simon 82 Centralizations. Key for Simon control mechanisms, which has a current finish in graphite gray. It is the single and half-element version key, which is part of the Simon 82 Centralizations series. It is, specifically, the individual and half-element version. Does not include signaling function or engraving on the device. The Simon key can be found in a total of five different finishes, so it is advisable to choose a frame that advocates the same finish as the chosen key socket. In this case, the frame should also be graphite gray, thus it will be possible to perfectly integrate the key in any space, maintaining an enviable aesthetic. It is possible to install it in two ways: surface or recessed. The maintenance of the product is minimal, since it only takes a soft cloth, slightly moistened in soapy water to clean the Simon keys. Avoiding the use of aggressive cleaning products is important to extend the life of the product.
