Single-pole push-button 16A K45 medium pilot indicator mechanism aluminum SIMON K113 / 8

Brand: SIMON

Reference: SIMON K113/8

Key with display for button with light function of 1 element aluminum Simon K45. This product is within the range of mechanisms and keys of the Simon K45 series. It is a key with display specially designed for a button with an element's lighting function. The product is made up of four modules and has dimensions of 45x22.5 millimeters and 10 millimeters deep. It is presented in a beautiful and modern aluminum color finish, so it is recommended to combine it with the button in the same finish, in order not to break with the aesthetic harmony of the final product. Its installation is very simple and is carried out by embedment or on the surface. Even so, it is necessary to emphasize that it does not allow combining two control mechanisms with a narrow key on an adapter plate for Simon 500 Cima or Simon K45. The manufacturing material is halogen-free thermoplastic. A quality material that has enormous benefits for this type of products since it does not contribute to the spread of flames in case of fire and also reduces the toxicity of smoke.
