SIMON 75805-39 Pass-Wait Mechanism

Brand: SIMON

Reference: SIMON 75805-39

Pass-wait display, suitable for adding new display points. Control of access to certain departments is very important in some companies. Doing it the right way will avoid setbacks that can ruin the work done previously. The Simon 82 series pass-wait display was created for this purpose. It is a device suitable for adding new display points that has a 230 V supply. Its easy installation, which can be surface or flush mounted on the wall in a matter of minutes, has made it one of the most popular devices. It has been manufactured with metal components with halogen-free thermoplastic insulation that allow it to have great resistance to shocks, as well as to the classic deterioration caused by high temperatures and the passage of time. It has a 1.5 to 2.5mm cable section and an 8mm cable strip and requires a diffuser.
