Product sheet

Brand: EDM

Reference: SIMON KS22/6

French socket base 16A 250V with safety shutter and red quick-connection terminals Simon K45. Educational centers, hospitals, hotels, or office headquarters are some of the spaces that already have in their facilities the French socket base with 16A intensity, 250V voltage, safety shutter, and red quick-connection terminals from the Simon K45 series. Its two modules offer the possibility of requesting a replacement pin, in case of breakage or loss, through reference AC33/6. Its structure has been manufactured with metallic components with self-extinguishing thermoplastic insulation and free of halogens, which guarantees non-propagation of flame in case of fire and low toxicity in case of smoke emission. Dimensions of 45x45x42.3mm, accepting a cable cross-section of 1.5 to 2.5mm and having a cable stripping length of 12mm are other characteristics of this socket base. Its installation can be carried out easily both surface-mounted and flush-mounted.
