Product sheet

Brand: SIMON

Reference: SIMON K22/7

French socket base 16A 250V with safety device and quick termination, orange Simon K45. In this category of socket bases and covers, you will find socket bases of all types and for all kinds of needs. The Simon K45 series, for example, handles everything related to connectivity at different workstations. This French socket base (16 Amperes of current and 250 Volts of voltage) with a safety device and quick termination type belongs to the same collection. Only for the most daring, as its finish is in orange color. The accepted cable cross-section is from 1.5 to 2.5mm (cable stripping to 12 millimeters). However, it is possible to directly link socket bases, without the need to strip or twist the different cables, through reference AC11. Like any Simon brand product, it is made with high-quality components: metal components, in this case, which have self-extinguishing thermoplastic insulation and are halogen-free, guaranteeing non-propagation of flame in case of fire and also low toxicity in case of smoke emission.
