Product sheet

SIMON 10000133-039 | Bipolar push button switch

Brand: SIMON

Reference: SIMON 10000133-039

The Simon 100 series control mechanisms have made safety and functionality two of their hallmarks since their first products. Suitable for embedding, we have the push-pull bipolar switch. The terminal connection is conveniently carried out on the same side and allows the cables to be installed one by one or all three at the same time, so it is much safer to separate the input and output cables in different holes. It has been manufactured with metallic components with halogen-free thermoplastic insulation that give it great resistance to bumps and scratches. This switch is compatible with all frames of the Simon 100 series, which allows many different options when making electrical installations in homes and businesses.
