## Description

Asparagus orchard seeds

- Variety of early cycle of good productivity, with a large shoot of medium green color.
- Sow in late winter/early spring, thinning the plants after a month and leaving them every 10 cm.
- In the following spring, the "legs" are obtained and transplanted from November to March.
- The harvest will take place the year following the transplant.
- An asparagus crop begins to produce after three years and maintains a good yield for ten years.
- Average duration of the harvest: 3 years.
- Planting depth: 2 cm .
- Germination temperature: 20-25°C.
- Exposure: to the sun
- Planting distances: 30 cm between plant and plant and 100 cm. between street and street.
- Heat-sealed bag to prevent the flow of air and light, this increases the chances of flowering.
- Item known as: urban garden seeds, vegetable seeds, aromatic seeds, cooking seeds .
