Description

High Resistance Grass Seeds- Measure: 1 Kg.- Valid for up to 40 m2.- Passable grass: Mixture prepared with herbs ideal for the formation of grass- Resistant to trampling Therefore, it is recommended for all those situations of use such as children's play areas, areas with moderate traffic, etc.- It adapts to all types of terrain and grows quickly, forming dense and compact mats.- Soil preparation: Before sowing the lawn, it is advisable to enrich the soil with nutrients with fertilizer. - The ideal is to use organic fertilizer in combination with peat (in the case of mature manure spread approx. 400 kg of manure for every 100 square meters of lawn). As an alternative, you can fertilize with complex mineral fertilizers at a rate of about 8 kg per 100 square meters of lawn.- Then, if possible, plow the soil to a depth of 30-40 cm or, in Failing that, carry out a good excavation.- Another possibility is to dig up the earth well. Before sowing, the soil must be worked again, breaking up the largest clods of earth and removing stones and weeds.- Finally, level the surface (you can use a rake) with a light slope to avoid harmful stagnation of water. - Sowing: The best time for sowing is September-October. The recommended dose is 1 kg of seed for every 40-50 square meters of lawn surface. Before planting, mix the contents of the bag well. - Sow by hand in cross passes, first in one direction and then in the other, to avoid leaving uncovered areas. After sowing, it is better to cover the seed with a thin layer of soil or peat. - You can also lightly rake the soil to bury the seeds. The soil should then be rolled or compacted.- Finally, water thoroughly.- Maintenance: Maintain frequent watering until the first seedlings emerge.

Specifications

High	31
Width	9
EAN	8000071968942
Manufacturer	PAPILLON
Long	20cm
Weight (kg)	1,142
Depth	20
