Product sheet

Junkers Hydrogenerator, Junker

Brand: JUNKER

Reference: GIB 001686

The Junkers hydrogen generator stands out for its efficiency in hydrogen production, optimizing energy processes. Its robust design and advanced technology guarantee reliable performance, contributing to sustainable energy solutions. Ideal for industrial applications requiring a constant and secure supply of hydrogen.

Description

The Junkers hydrogenerator is a device designed to optimize the operation of heating and hot water systems. This equipment harnesses the hydraulic energy generated by the flow of water to produce electricity, enabling efficient and autonomous ignition of boilers and heaters without the need for connection to the electrical grid. Its compact and efficient design makes it a practical solution for improving the energy efficiency of heating systems.

- **Energy type:** Hydraulic, generated by the flow of water.
- **Compatibility:** Compatible with Junkers boilers and water heaters.
- **Installation:** Easy integration into existing heating systems.
- **Dimensions:** Compact, designed for small spaces.
- **Material:** Constructed from corrosion-resistant materials for greater durability.
- **Operation:** Stand-alone, does not require a connection to the mains electricity supply.
- **Generating capacity:** Sufficient to power boilers and heaters.
- **Maintenance:** Low maintenance thanks to its robust design.
- **Safety:** Includes overload and short-circuit protection systems.
- **Operating Temperature:** Designed to operate in a wide temperature range.
