Double Effect Suction Cup - 1/2", ABRISA

Brand: ABRISA

Reference: GIB 004598

device designed to optimize drip irrigation systems, it eliminates air from water lines. Its double-acting function ensures efficient filling and protects pipes from crushing, facilitating the entry of atmospheric air under low-pressure conditions.

Description

The double-acting air valve is an essential component for drip irrigation systems, designed to control and eliminate air in water pipes. Its function is crucial to maintain the efficiency of the system, as it extracts air from the pipes while they fill with fluid and protects them from crushing by allowing atmospheric air to enter in the event of a depression.

- Valve type: Double-acting air valve with male spring.
- Connection: Male thread.
- Manufacturing material: Polypropylene (PP).
- Available sizes: 1/2" and 1".
- Sales mode: Bulk.
- Function: Control and elimination of air in water pipes.
- EAN13: 8432453045987.
