Description

The 70-hour reserve time switch is an analog timer designed to provide precise and efficient control of the operating time of electrical devices. Its compact design and advanced functionality make it a practical solution for managing the automatic switching on and off of equipment.

- Dimensions: 1 module wide, allowing easy integration into standard electrical panels.
- Power reserve: Maintains programming for 70 hours in the event of a power failure.
- Programming: This is done using captive brackets, which facilitates adjustment and prevents configuration loss.
- Reading: The programming carried out is easily visible, allowing quick verification of the device's status.
- Installation: Designed for easy installation, optimizing the user's time and effort.
- Programming intervals: Allows adjustments in 15-minute intervals, offering flexibility in time management.
- Operating modes: Includes three different modes: permanent on, permanent off, and automatic, adapting to various usage needs.
