Description

The **Kukko-44-4** is a 2-legged, self-centering bearing puller designed to deliver exceptional performance when removing tightly clamped parts. Measuring **250x200 mm**, this model features an innovative automatic self-centering system for the extraction hooks, ensuring precise and efficient clamping. The spindle head depth stop prevents the wrench from slipping, providing greater safety during use.

Made with forged special steel legs, the Kukko-44-4 is robust and durable, ideal for removing components such as gears, pinions, bearings, and pulleys. Its unique design allows for automatic grip adjustment and quick clamping, while the self-locking mechanism ensures the legs remain firmly in place.

When the spindle is tightened, the legs grip the workpiece, exerting a force that automatically increases, thus facilitating the extraction process.

- 2-Leg Model with Automatic Self-Centering
- Depth Stop on Spindle Head
- Legs Made of Special Forged Steel
- Automatic Grip Adjustment
- Quick and Self-Locking Clamping
- Capable of Extracting Firmly Gripped Workpieces
- Ideal for Gears, Pinions, Bearings, and Pulleys
- Components Available as Replacement Parts
- Number Engraved on the Workpiece for Identification

- Original KUKKO Design

Specifications

High	7,00
Width	16,00
EAN	4021176016363
Manufacturer	Kukko
Weight (kg)	3,2000
Depth	31,50
