Description

The Kukko-206-00 is a 3-legged, articulated bearing puller designed to deliver exceptional performance in removing belt pulleys, sprockets, bearings, and similar parts. Its innovative articulated leg system allows the claws to grip the workpiece more firmly as pulling force is applied, ensuring a secure and efficient hold. Perforations in the legs allow for different reach options, adapting to various applications. Additionally, the depth stop on the spindle head prevents the wrench from slipping, providing safer and more controlled use.

- Robust and durable model for industrial applications.
- Self-locking system that increases gripping force in proportion to the pulling force.
- Adjustable leg length for greater versatility in the workplace.
- 3-leg puller that ensures even force distribution.
- Concentric pulling that minimizes the risk of damage to workpieces.
- Good grip on the workpieces being pulled, improving process efficiency.
- All components can be supplied as replacement parts.
- Number engraved on the part for easy identification of spare parts.
- Optimized design for prolonged and efficient use.
- Ideal for professionals who require high-quality, high-performance tools.

Specifications

High	10,50
Width	10,50
EAN	4021176029158
Manufacturer	Kukko
Weight (kg)	0,6000

Depth	13,50
