

Product sheet

KUKKO two-shell bearing puller for diameters of 8-12 mm.

Brand: Kukko

Reference: TUR 21-01

Kukko-21-01 internal bearing puller, designed for bearings with a diameter of 8-12 mm. Its two-shell design with extra-large edges ensures safe removal. Compatible with counterweights and slide hammers. Includes a grease tube for lubrication.

Description

The Kukko-21-01 is an internal bearing puller designed to deliver exceptional performance in removing internal bearings, outer bearing rings, and bushings with diameters ranging from 8 to 12 mm. Its robust and durable construction ensures a long service life, while its dual-segment design with extra-large gripping edges provides safe and efficient extraction. This puller features an internal opening stop that protects against overloading, minimizing the risk of breakage during use. It is also compatible with counterweights and slide hammers, further expanding its versatility in various applications. For those who need to reach deeper bearings, optional 21-V series extensions are available. The Kukko-21-01 also includes a special grease tube to keep the spindle properly lubricated, ensuring optimal operation at all times.

- Pullout diameter: 8-12 mm
- Dual-segment design with extra-large gripping edges
- Internal safety stop to prevent overloading
- Compatible with counter supports and impact bar
- Optional 21-V series extensions available
- Robust construction for high performance
- Long service life
- Includes special Kukko grease tube
- Ideal for pulling inner bearings and outer rings
- Safe and efficient use

Specifications

High	2,00
------	------

Width	2,00
EAN	4021176010651
Manufacturer	Kukko
Weight (kg)	0,0800
Depth	10,00
