Description

The Kukko-120-20 is a Vario 2-leg universal bearing puller designed to offer an efficient and versatile solution for removing components such as bearings, sprockets, and discs. Its innovative design allows for quick changing or rotating of the puller legs using a simple locking mechanism, making it easy to use in various applications. This puller can be used for both external and internal removal by simply rotating the puller hooks as needed. Furthermore, the depth stop on the spindle heads ensures the wrench stays in place, preventing unwanted slippage during the removal process.

The Kukko-120-20 features standard puller hooks that are progressively adjustable along the crossbar, allowing for precise adaptation to different part sizes. Its mechanical spindle and interchangeable spindle tip ensure smooth and efficient operation. The rolled thread is treated with a special coating for increased durability and wear resistance.

For applications where there is sufficient space to maneuver, the use of a 3-arm puller is recommended for optimal load distribution.

- Dimensions: 250 x 150 mm
- 2-Leg Puller
- Quick leg change with locking mechanism
- Suitable for external and internal extraction
- Depth stop on spindle heads
- Adjustable extraction hooks
- Mechanical spindle
- Interchangeable spindle tip

- Rolled thread with special coating
- Replaceable components with engraved number

Specifications

EAN	4021176918674
Manufacturer	Kukko
Weight (kg)	3,0000
