Description

The adjustable crown saw is a tool designed to make precise cuts on plasterboards and soft wood panels, adapting to different drilling needs.

Technical characteristics

- Type: Crown saw
- Action: Adjustable between 35 and 80 mm in diameter
- Includes: Allen keys for quick adjustment
- Vástago: Triangular for universal compatibility
- Maximum speed: 1,000-1,500 revolutions per minute
- Implementation: Cutting of plaster and soft wood
- Teeth: Setup in 3 optimized groups

Thanks to its triangular stem, this saw is compatible with any standard screwdriver, facilitating its use in various construction environments. Integrated scales allow the required drilling diameter to be adjusted accurately.
