Description

The BARBI Multipex 16 elbow is a connecting part specifically designed for pipe installations. Its main function is to allow the change of direction in the flow line, ensuring a stable connection between the straight sections of the installation.

Technical characteristics

- Compatibility diameter: 16 mm.
- Mark: BARBI.
- Type: Multipex elbow.

This piece is aimed at facilitating the management of referrals in channeling systems. Being dimensioned for 16 mm pipes, it allows to integrate angular connections maintaining continuity of the hydraulic or gas circuit, according to the specific application of the Multipex system.
