Description

The MCA-250 anti-return gate is a device designed to be installed in the offloading of fans in line. Its main function is to prevent air circulation when the fans are not in operation, thus avoiding unwanted reverse flow in the ventilation system.

Technical characteristics

- Model: MCA-250
- Installation location: Download fans in line
- Function: Prevents the circulation of air at rest

This component ensures the tightness of the system when the machinery is stopped, contributing to energy efficiency and air flow control in forced ventilation facilities.
