Description

The MCA-350 anti-return gate is a component designed to be installed in the offloading of fans in line. Its main function is to prevent reverse air circulation when the fans are not in operation, ensuring flow control in the ventilation system.

Technical characteristics

- Model: MCA-350
- Installation location: Download fans in line
- Function: Prevents air circulation with off fans

This device ensures that the air does not retreat through the duct when the system is inactive, maintaining the operational efficiency of the ventilation equipment.
